

ABSTRACT

An absorbent feminine care article (20) has a longitudinal direction (22), a lateral direction (24), a first end portion (72), a second longitudinally opposed end portion (72a), and an intermediate portion (76) located between the end portions. The article includes a liquid-permeable topsheet or cover (26); a backsheet or baffle (28); and an absorbent body (30) sandwiched between the cover and baffle. The absorbent body (30) includes an intake layer (32) and a longitudinally-asymmetric shaping layer (36); and the intake layer (32) is positioned between the cover (26) and the shaping layer (36). The shaping layer (36) has first longitudinal half-length (84), a second longitudinal half-length (86), a narrow-section (62), a wide-section (64), and a transition-section (66) that is located between the narrow section and wide section of the shaping layer. The intake layer (32) is longitudinally offset toward an article region which is delimited by the first half-length (84) of the shaping layer (36).
